Aspiring AI & Analytics Professional | Enterprise AI, Data Analytics, and Digital Transformation

# Noah Brooks

# About Me

## Education

Senior at Villanova University
Major: Management Information Systems
Minor: Artificial Intelligence

VILLANOVA BUSINESS

## Location

North Wales, PA (Small suburb outside of Philadelphia)

## On Campus Activities

Kappa Alpha Psi Fraternity, Inc.
NABA (National Association of Black Accountants
WISE (Working to be Informed, Studious, and Engages
Black Student Union

Relator

## Hobbies/Fun Fact

Weightlifting
Photography/Videography
Love to travel
Favorite food: Philly Cheesesteak

# Working to be at the intersection of AI, technology, and human impact.

I am an aspiring AI and analytics professional with hands-on experience developing AI agents, monitoring enterprise systems, consulting engagements, and researching emerging business technologies to solve real world problems. Through academic coursework and internship experience, I have developed a strong foundation in AI adoption, analytics, and enterprise technology strategy, with a focus on creating practical, data-driven solutions that deliver business value.

# My Collegiate Journey

**2023**

Attended NABA Regional Conference as Howard University where I gained valuable insights into how to navigate corporate America.

**2024**

Started my own entrepreneurial freelance photography business.

**2024**

Selected as the Event Coordinator for W.I.S.E. to promote professional development events for men of color on campus.

**2025**

Elected as the Strategus for the Delta Eta Chapter of Kappa Alpha Psi Fraternity, Inc.

# My Career Journey

**2024**
Data Entry Intern
Philadelphia, PA

**2025**
Financial Crime
Technology Intern
New York, NY

Future

**2026 and Beyond**
Looking for full-time roles in AI business transformation, tech consulting, and risk/strategy/analysis

# Core Skills

100%
AI Business Application
Problem Solving
Risk Analysis
Digital Strategy
Connecting With People

# Portfolio Sections

1

### Agentic AI Solution Development

Developed an AI Agent utilizing technical tools to analyze financial data.

2

### Applied AI for Consulting Impact

Utilizing AI tools to increase efficiency, clarity, and client value in consulting deliverables.

3

### Nike Consulting Case Competition

Created a data-driven channel strategy to optimize revenue mix, margins, and consumer reach.

4

### What's next?

Aiming to grow at the intersection of AI business transformation, risk/strategy, and data analytics, to make a positive consumer impact.

# Agentic AI Solution Development

1

# 1 Agentic AI Solution Development 2025

Development of Agentic AI for Financial Crime Investigation for Actimize

## Challenge

Financial crime investigators rely on complex, fragmented data within Actimize systems to assess suspicious activity and produce regulatory-compliant SAR narratives. Manual data extraction and narrative drafting are time-intensive, inconsistent, and cognitively demanding, limiting analyst efficiency and slowing investigative throughput.

- The challenge was to design an AI-enabled solution that could structure investigative data, support analyst decision-making, and improve narrative generation without disrupting existing workflows.

## Actions & Results

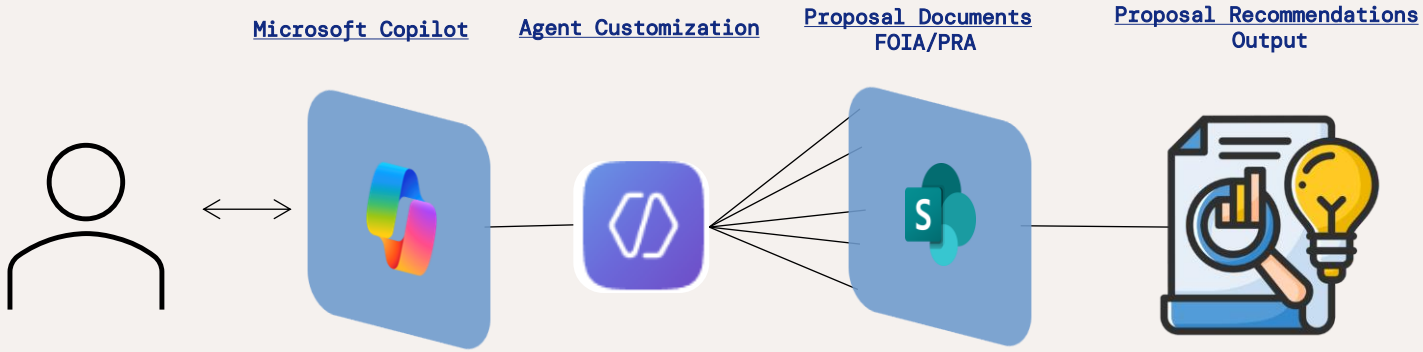
- Designed and implemented an agentic AI framework to support financial crime investigations by structuring Actimize data and generating investigative narratives.
- Developed Python-based workflows and leveraged Azure AI APIs to orchestrate LLM interactions, SQL queries, and data handling.
- Identified and extracted relevant data columns via SQL to support contextual analysis and accurate investigative narrative.
- Improved consistency and efficiency in investigative documentation while establishing a scalable architecture aligned with analyst workflows and evolving business requirements.

# Applied AI for Consulting Impact

2

# 2 AI Tool for Consulting Proposal Intelligence 2025

Utilizing Microsoft Copilot to increase efficiency, clarity, and client value in consulting deliverables.



## Challenge

Create a unique, high-impact tool that blends public sector strategy, AI, and competitive intelligence by extracting information from past proposals and publicly obtained (FOIA/PRA) competitor data to help improve future proposals and inform pricing strategies.

## Actions & Results

Developed a Copilot AI agent that analyzed historical proposals and publicly available competitor data stored in SharePoint, enabling faster insight synthesis, clearer proposals, and more consistent, data-informed pricing and positioning recommendations.

# Nike Consulting Case Competition

3

# Nike Consulting Case Competition 2025

Revitalizing Nike's Channel Strategy Through Data-Driven Consumer Engagement

## Challenge

Nike faced the strategic challenge of deepening consumer connection while balancing accessibility, scale, and premium brand control. Rapid growth in direct-to-consumer (DTC) channels improved margins but constrained reach, while continued reliance on wholesale partnerships diluted brand visibility and limited control over pricing and consumer experience.

- The objective was to design a scalable, data-driven channel strategy that protected brand equity while sustaining long-term growth and engagement.

See the full presentation here.

## Actions & Results

- Conducted a comprehensive channel strategy analysis evaluating revenue mix, margins, consumer engagement, and industry benchmarks.
- Developed a balanced direct-to-consumer (DTC) and wholesale operating model to optimize growth and margin stability.
- Designed a phased expansion of lifestyle-driven pop-up retail experiences integrated with the Nike App to enhance brand storytelling, community engagement, and data capture.
- Proposed a data-informed strategy projecting an **8-12% revenue increase over three years** and a **20% lift in consumer engagement**, while preserving pricing power and strengthening brand equity.

- Placed among the top competitors out of 42 total teams.

# What’s Next?

# What's Next?

## 2026 and Beyond

To build a career at the intersection of AI, analytics, and enterprise strategy, where technology is designed to meaningfully support people and improve decision-making. In the near future, I aim to deepen my technical foundation in AI systems, data engineering, and analytics while working closely with business and end users to ensure solutions are practical, ethical, and impactful. To continue growing beyond implementation, I am motivated to develop a stronger understanding of how organizations operate, how risk and governance shape technology adoption, and how AI can be responsibly scaled to deliver long-term value. I see my trajectory evolving toward roles that bridge technical innovation with human judgment using AI to reduce friction, increase trust, and amplify human insight rather than replace it. To remain grounded in impact, I seek collaborative environments where learning, mentorship, and diverse perspectives are valued, and where technology is ultimately measured by how well it helps people, customers, analysts, and communities do their work more effectively.
